

Michiel Bähler, advisor/ psychologist, for years I work for GGZ Noord Holland Noord in The Netherlands. During this period the transition from hospital based to community based psychiatry took place and the concept of recovery became leading. Together with Remmers van Veldhuizen, we developed the Flexible ACT model.

A service delivery model for supporting service users were they want to succeed. Together with the CCAF (www.ccaf.nl) we also developed the FACT fidelity scale, a tool to measure the implementation of FACT teams which helps teams to implement the model. My passion about this work is a strong belief that recovery is possible.

EUCOMS is a beautiful platform to learn from each other.
